

Quality Attributes, Selected Architecture And High Level Diagram of LibTracker

Simplicity -> There are various types of users for this app so everyone should understand and use easily. So that they can save time as intended.

Accuracy -> The program completely based on accuracy, so every information that program provides has to be accurate. This improves user satisfaction.

Scalability -> In case of large amount of users at certain time spans, such as final weeks, system should not be crashed. Also, system can be implemented to common spaces outside of libraries at schools. So, codes should also be scalable.

Layered Architecture -> We will be using **Layered** Architecture, because it is understandable, easily implemented by juniors, and maintained easier compare to other architectures. Choosing such architecture would provide us to implement our quality attributes in a most efficient way.
